## ADVANCE DATA ON LARGE RETAILERS' PROFITS FOR THE SECOND QUARTER 1999

After-tax profits for retail corporations with assets of \$50 million and over averaged 2.4 cents per dollar of sales for the second quarter of 1999, up 0.2 ( $\pm 0.1$ ) cents from the preceding quarter, but down 0.5 ( $\pm 0.1$ ) cents from the same quarter in 1998, according to advance data from the Commerce Department's Bureau of the Census.

For the second quarter of 1999, these large retail corporations reported after-tax profits of \$7.0 billion, up \$0.7 ( $\pm 0.2$ ) billion from the preceding quarter, but down \$0.9 ( $\pm 0.2$ ) billion from the same quarter a year ago. The annual rate of after-tax return on stockholders' equity was 13.0 percent, up 1.1 percent ( $\pm 0.3$ %) when compared to the first quarter of 1999, but down 3.0 percent ( $\pm 0.4$ %) from the second quarter of 1998.

Second quarter 1999 sales were \$298.5 billion, up \$13.9 billion or 4.9 percent ( $\pm 1.7$ %) from last quarter and up \$24.3 billion or 8.9 percent ( $\pm 1.8$ %) from the second quarter of 1998.

These data are based on quarterly financial reports obtained from 502 corporations. The figures in this release are *not* seasonally adjusted. More detailed information on the retail trade sector for the second quarter will be published in the Quarterly Financial Report for Manufacturing, Mining, and Trade Corporations—Third Quarter 1999 which is scheduled for release on December 13, 1999.

### EXPLANATORY NOTES:

This quarter's publication contains data revised due to the reclassification of corporations by industry, and revisions that reflect respondents' corrections of data submitted subsequent to original publication.

The data presented in this report are estimated from a sample survey and therefore are subject to sampling variability as well as nonsampling variability such as response error, nonreporting, and coverage errors. Estimates of sampling variability are presented in the publication. A statement such as "up 2.5 ( $\pm 0.1$ ) cents," appearing in the text, indicates the range (+2.4 to +2.6 cents) in which the actual change is likely to have occurred. The range given for the change is a 90 percent confidence interval that accounts only for sampling variability. If the range had contained zero (0), it would have been uncertain whether there was an increase or decrease; that is, the change would not have been statistically significant. For any comparison cited without a confidence interval, the change is statistically significant. The quarterly publication includes more detailed explanations of confidence intervals and sampling variability, along with additional measures of sampling variability.

This report is available on the day of issue through the Department of Commerce's on-line Economic Bulletin Board (202-482-1986) and on the Internet (<http://www.census.gov/csd/qfr>).
